SUMMARY

Java Full Stack Developer with over 5 years of experience designing scalable microservices architectures and high-throughput enterprise systems. Proficient in Core Java 17, Spring Boot 3, and modern front-ends (Angular/React), with extensive hands-on expertise managing relational data in Oracle, building with Maven, and versioning via Git. A self-starter with strong analytical skills and a proven track record of implementing secure JWT/OAuth2 protocols and delivering cloud-native solutions in fast-paced Agile environments.

SKILLS

Languages: Java (8, 11, 17), TypeScript, JavaScript (ES6+), SQL, HTML5, CSS3, SCSS

Backend Frameworks & Technologies: Spring Boot (2.x, 3.x), Spring WebFlux (Reactive), Spring MVC, Spring Security (OAuth2, JWT), Spring Cloud (API Gateway, Eureka, Config Server), Spring Data JPA, Hibernate, Spring Batch, gRPC, Camunda BPM

Frontend Frameworks & Libraries: Angular (11, 12, 13, 17), React (16, 17, 18), Redux Toolkit, NgRx, RxJS, React Query, Formik, Tailwind CSS, Bootstrap, Material-UI, PrimeNG, Chart.js, D3.js, Highcharts

Databases & Caching: PostgreSQL, Oracle (19c), SQL Server, MySQL, MongoDB, Cassandra, Snowflake, Redis (Distributed Caching)

Messaging & Integration: Apache Kafka, RabbitMQ, Apache Camel, RESTful APIs, GraphQL, WebSockets

Cloud & DevOps: AWS (EKS, ECS, Lambda, Step Functions, SQS, SNS, S3, Glue), Docker, Kubernetes, Helm, Terraform, OpenShift

Build, CI/CD & Version Control: Git, GitHub, Bitbucket, Maven, Gradle, Jenkins, GitHub Actions, GitLab CI/CD, SonarQube

Testing & Observability: JUnit 5, Mockito, Testcontainers, Selenium, Splunk, Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana)

Architecture, Tooling & Methodologies: IntelliJ IDEA, VS Code, Microservices Architecture, Event-Driven Architecture, Reactive Programming, Object-Oriented Programming (OOP), Design Patterns, Rest API Design, Agile/Scrum, HIPAA Compliance

EXPERIENCE

Java Full Stack Developer | Charles Schwab | USA

Mar 2025 – Present

- Spearheaded development of a reactive trading pipeline using Core Java 17, Spring WebFlux, and React 18, utilizing Maven and Git to deliver low-latency real-time market feeds that reduced order confirmation times to sub-100ms.
- Optimised client-facing advisor dashboards with Angular 17, Spring for GraphQL, and Highcharts, ensuring strong analytical processing to eliminate data over-fetching and achieve sub-second rendering for complex portfolio asset allocations.
- Streamlined account opening workflows by engineering self-contained microservices with Spring Boot 3, AWS Step Functions, and Camunda, cutting client onboarding and KYC processing time by 50% with minimal guidance.
- Leveraged distributed caching and streaming architectures via Redis and Apache Kafka to manage equity order books, working within an Agile methodology to ensure strict data consistency across thousands of concurrent transactions.
- Orchestrated multi-environment microservice architecture container deployments using AWS EKS, Kubernetes, and Terraform, building declarative infrastructure and GitHub Actions workflows to ensure high availability of core brokerage services.
- Configured complex analytical batch processing using Spring Batch, Oracle databases, and Apache Spark, automating nightly asset valuation data processing to guarantee accurate morning portfolio risk metrics.

Java Full Stack Developer | HCL Technologies | India

Jul 2019 – Jul 2023

- Designed and implemented a secure Enterprise Banking Portal using Core Java 17, Spring Boot 3, and Angular 12, integrating Spring Security (JWT/OAuth2) and Oracle SQL caching to reduce transaction latency by 30%.
- Engineered a workflow-driven Insurance Claims System utilizing Spring Batch, Maven, and React 17, automating the claim-routing engine and leveraging Git for version control to cut manual processing time by 40%.
- Decomposed a monolithic application into 8 scalable microservices based on J2EE fundamentals, utilizing Spring Boot 3, Docker, and Kubernetes with Resilience4j circuit breakers to achieve high fault tolerance.
- Developed a compliant patient records portal using Java, React, and an Oracle relational database, integrating Elasticsearch and detailed audit logging to ensure real-time schedule availability and strong regulatory compliance.
- Architected a high-throughput Telecom Billing Portal within a microservice architecture using GraphQL, Angular, and Cassandra, optimizing complex data queries to process millions of usage records daily.
- Constructed asynchronous event-driven architectures using Apache Kafka and RabbitMQ, demonstrating strong analytical skills and problem-solving ability to ensure reliable transaction event streaming across distributed services.
- Established robust CI/CD pipelines using Jenkins, OpenShift, and SonarQube while authoring automated test suites in JUnit and Mockito within an Agile development environment to accelerate deployment cycles.

EDUCATION

Master of Science in Computer Science | Purdue University | Indianapolis, IN, USA

May 2025

Bachelor of Technology in Computer Science and Engineering | GITAM University | Vizag, India

Jun 2021

PROJECTS

CartVerse– Scalable eCommerce System

- Built a scalable eCommerce system, designing a Spring Boot backend with REST APIs and PostgreSQL that reduced order processing time by 20%, and enhanced deployment efficiency by 20% using Dockerized microservices.

Netflix-Style Portfolio Website

- Executed a Netflix-style portfolio website using React.js, Tailwind CSS, and Framer Motion, achieving 95+ Lighthouse scores and sub-1.5s load times through lazy loading and Vercel deployment.

CERTIFICATION

- Microsoft Azure
- Java for Android
- Python Programming
- Android Development Specialization
